Portfolio structure by sector

(In % of total assets)

Fund description

The objective of the investment policy for BZ Fine Funds – BZ Fine Digital (the “sub-fund”) is to achieve appropriate growth in the respective share class currency taking account of the investment risk. The aim is to achieve long-term capital growth with the expectation of a strong correlation with conventional equity investments. The total yield of the sub-fund must not only contain the whole of the invested capital but must also be at least equal to inflation and produce an attractive actual yield. The Fund invests in companies operating in the information technology (IT) sector. These include manufacturers of hardware and software, providers of IT services and related sectors. The name of the subfund has been changed to BZ Fine Digital as of May 24 2021.

Risk profile of the Fund

Due to the composition of the sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The principal risks of the sub-fund lie in the concentration of the assets in a specific sector. Compared with the financial market for all sectors, bigger differences in market movements and developments may occur in the short and medium term compared with a specific sector of industry whether due to a different stage in an economic cycle or to sector-specific circumstances or political circumstances.
